PleX update broke my reverse proxy configuration

[Help](#)

Hello!

I have a PleX server on my home pc and I have a vpn to my home to access it trough private ip. As I have a lot of services running, I installed Nginx, created a url for it, and started mapping.

The problem is:

All of my urls are under one single domain name, i.e., i access media.mydomain.com, it gives me a home page for my internal links, and when i click one, it redirects to media.mydomain.com/plex, and after the last update, plex isn't working anymore! It gives me all white screen, no errors on error.log or access.log on nginx side.

The only error i found is in console from the browser, it gives me this:

```
✖ Failed to find a valid digest in the 'integrity' attribute for resource 'index.html:35'
http://[redacted]/plex/web/main-8792-35b85b3_-plex-4.136.1-8affb58.css' with computed
SHA-384 integrity 'HoEw02VPLQv1F2S6F5FnZPMHV6+fgUcepj90InrdhK54D+VHaFqPFfbbmAEODRS'. The resource
has been blocked.
```

Haven't found a solution yet for the current version but will be keeping an eye on this thread! If I find a workaround will post here as well. - Cheers!
