An Updated Guide for Adobe Zii in 2024

`Solved`

I have parsed through this subreddit for a bit and this is how I installed the adobe 2021 version of the creative cloud on my pc. A couple requirements for my method were:

1. I needed to be able to install without root privileges or be in an isolated environment when root is required. I think its fair to say that the TNT group is a reputable source, but its always better to be safe. I have used their software before and never had issues. The risk comes from the distributor as most of these hacks are posted on private forums.

2. The actual software needs to come from adobe. This eliminates the risk of malware being injected by a third party.

3. I'd like to run the latest version of Adobe CC in case I get access to a legitimate copy of a program.

Why not just download the latest versions (2024) of adobe on cmacked or torrentmac?

any updates here?
i'm thinking about uninstalling it, installing it again and using Little Snitch to block adobe connections

Yes, after getting the non-genuine 5 day countdown warning, I just blocked all Adobe product Internet access with Little Snitch. In my case I didn't even have to reinstall Photoshop and the warning went away.
