## List of IP addresses and networks that are allowed without auth

**Solved**

I want all LAN devices to access my LAN plex server without internet (in the event of outage). I see many articles about this, but I do not see how I can enter a range of IP addresses - I any device on my own LAN to be able to use PLEX with no internet. What is the format for a range of IP addresses in the " List of IP addresses and networks that are allowed without auth " filed under network settings. Please and thank you.

This is listed on the plex page.

If for instance you wanted all ips like 192.168.0.x to be available you can enter

192.168.0.0/255.255.255.0 or

192.168.0.0/24

is what I want so I used

192.168.1.0/255.255.255.0

thank you for that

This is a stupid question which I'm afraid to ask: Why can Plex Home users not use this? What exactly breaks?

IP address/netmask - so 192.168.0.0/24 for example - will include the entire subnet. Or are you looking for a subset of the full subnet?

I would be looking for a subset range of addresses on my local LAN eg 192.168.0.100-192.168.0.200 . What syntax should be used to specify a range like that?
