Access files using sftp in Finder?

[Help](#)

Is there any way to access files using sftp in Finder? Using sftp://user@hostname would result in opening VLC trying to connect to host which seems to be a very old known bug, but with VLC uninstalled MacOS responds with: The file couldn't be opened. Anyone encountered similar issues?

I would appreciate any help or advice. Thank you.

It didn't really help but I managed to resolve the issue with macfuse + sshfs.
Thank you.

This may be a stupid question but is there a reason that Finder can't tell me what specific programs are using the drive instead of being vague?

New to Mac, long time Linux user. For obvious reasons I feel at home in the terminal but as far Desktop, I find Finder lacking. Any third party suggestions to replace it? TIA
