Built a 7600x build. Plugged in HDMI cable into motherboard into LG Oled but no display. Doesn't the 7600x have an integrated GPU?

Solved!

Not sure what's going on

Edit:

Fixed! Was a yellow debug light indicating a ram issue. Reseated it and all good

It says it does, if you have a GPU laying around try using it and install the drivers for it, but I would think it would work out the box. YouTube is your next best idea.

on amd site they say it does have 2 core count graphics processor... have you tried other port on your motherboard? have you selected the right port on your monitor(in case it doesnt have auto)?

you dont have a GPU?

1 [Reply](#) ...

TranslatorNatural640 [OP](#) • 2y ago

Not as of right now. Currently studying for my exams. Needed a computer to set up a homelab but also wanted a gaming computer for the future. Will get a GPU when I have time for games in the future.

Does the 7600x support 4k 120hz with full 4:4:4 HDR and everything? Or do you have to compress the stream a bit to get the 120hz out of your TV and 4k at the same time?

Are the GPU cables too bent? What would be a better way to power this?
