ACLs to restrict user (or group) to exit node only and nothing else

Question

After reading the docs it's still not clear to me how to accomplish the following:

I have **two users with a single machine each** join my tscale network. i set them up to use as **exit nodes**, and **this works fine**.

I'd like to **restrict those two users** (and their machines) from being able to connect to any other machine on the network. they should **only be able to act as exit nodes**.

how do I modify the default ACLs to accomplish this? It would be good to create a group to do so, so that I don't need to modify the ACL further. I'd only add the user to the group `exit_nodes_only`.

```
{
// Declare static groups of users. Use autogroups for all users or users with a specific email
"groups": {
  "group:exit_nodes_only": [
    "someemail@somewhere.com",
    "anotheremail@somewhere.com",
  ],
},

"acls": [
//the admins of this tailnet can get everywhere
{"action": "accept", "src": ["autogroup:admin"], "dst": ["*:*"]},

//Admins and exit nodes only users can use exit nodes
{
  "action": "accept",
  "src": ["autogroup:admin", "group:exit_nodes_only"],
  "dst": ["autogroup:internet:*"],
},
//people we share exit nodes with can use our exit nodes
{
  "action": "accept",
  "src": ["autogroup:shared"],
  "dst": ["autogroup:internet:*"],
},
],
}
```

It is worth mentioning that, when a peer exits through a node, with autogroup:internet, that peer will be able to get to internet through that exit node, but otherwise cannot connect to that exit node.

Cool!
