Is there a small a pcie to thunderbolt 4 adapter

Im trying to make a cyberdeck with a low profile desktop GPU (3050 6gb) and a framework mainboard but i need a way to connect them , is there a way i can take out the wifi card and use that slot ? or should i try to find a adapter for the thunderbolt port (perferably a small one that can fit in the chassis)

Ryzen compatibility with TB4 is questionable since not all USB4 is TB4 bc the TB4 part is optional, and you need to pay intel to certify it.

Is there any other options for the thunderbolt? Preferably one as small as possible so it can fit inside my cyberdeck
