Anyone able to see why I can't get the Nextcloud AIO working on docker in Windows?

I'm honestly just frustrated with Nextcloud at this point on Windows at least. I want to get it working on my Windows server because I use some programs like EAC for CD ripping into FLAC which does not exist on Linux to my knowledge, and it was working until 2 weeks ago out of nowhere with no changes and no use at all. I randomly started getting errors like this after not using nextcloud much:

```
[Wed Sep 04 21:54:24.888431 2024] [core:notice] [pid 765:tid 765] AH00094: Command line: '/usr/local/apache2/bin/httpd -D FOREGROUND'
```

```
2024-09-04 15:54:24 {"level":"info","ts":1725486864.891314,"msg":"failed to sufficiently increase receive buffer size (was: 208 kiB, wanted: 7168 kiB, got: 416 kiB). See https://github.com/quic-go/quic-go/wiki/UDP-Buffer-Sizes for details."}
```

After referencing that link and so many Nextcloud forum posts (such as [this](#)) and banging my head against the [Read more](#) ▾

and drops the packets.

I'm not sure how it was working for you before, but when I set up AIO I got the same errors until I set up a Pi-hole and created a DNS record for my domain name pointing to my Nextcloud server.

You could try [skipping domain validation](#), but based on what you describe I'm not sure it will work.

I'm not sure how it was working for you before, but when I set up AIO I got the same errors until I set up a Pi-hole and created a DNS record for my domain name pointing to my Nextcloud server.

Yeah I don't understand it myself as I'm still learning the ins and outs of Nextcloud, but I got it working without any of that. I set it up as the AIO describes, set my public IPv4 as the A record on my domain in Namecheap, opened up the port 443, and voila it was working! It took me to the Welcome to Nextcloud page, and I was able to upload files and do whatever from there. That's annoying though if you have to set up a whole new container, a whole application, just to get around this error.

Thanks for the feedback! I'll look into Pi-hole. Hopefully it's not too difficult or time-consuming to set-up.

Try reinstalling nextcloud with tailscale, and no need to change router ports.

LinkedIn : https://www.linkedin.com/posts/r-quazi_stop-using-slackmicrosoft-teams-take-control-activity-7242929602292023296-U9As?utm_source=share&utm_medium=member_desktop

I've written a comprehensive guide here: <https://dev.to/r-quazi/take-control-of-your-data-self-hosting-nextcloud-4enf>
