Custom DERP server running and connected, but can't work as relay

Help Needed

I have setup a headscale server on my rented VPS. It uses a https domain and is working fine, despite the tunneling frequently fails. So I tried to also setup a custom DERP server.

And while I can connect to my DERP server from every node:

```
> tailscale netcheck
Report:
* UDP: true
* IPv4: yes, [REDACTED]
* IPv6: no, but OS has support
* MappingVariesByDestIP: false
```

I assume you have set the ACLs on admin console for this custom derp server. See their website.

While looking at the docker logs, I found that the timezone was incorrect. After mounting the `/etc/localtime` I have been able to get the derp server to work now.
