SWAG(NGINX) & Authentik OAuth2

[Need Help](#)

Hey all,

I have been using SWAG and Authentik to secure my server's applications for external access and it's been working well. I wanted to make some quality-of-life tweaks by adding OIDC. I previously had Authentik setup with each application provider set to Forward Auth Proxy (Single Application) and routed it through Authentik's outpost. This works as intended. When I switch the provider to OAuth2 for OIDC, the logs show 404 errors. If I test locally and replace my subdomain entries in Authentik with my local IP and application ports, OIDC works perfectly. I assume the issue would be related to SWAG's authentik-location.conf referring to the outpost for auth requests and the OAuth2 providers not being an option in the outpost within Authentik. I don't know enough to properly troubleshoot beyond this point without some direction from my betters. If anyone has suggestions or ideas, I'd appreciate it!

****UPDATE****

Did you ever figure this out? I've been pulling my hair out trying to use forward auth and OIDC. I can make them work independently but they don't work together.
