WiFi 7 Mesh - hardware selection

Question

Hi everyone,

I am looking for advice on which hardware to choose for a UniFi WiFi 7 Mesh network. At the moment I run a pair of TP-Link Deco X75 pro and they work just fine, but they lack multi-SSID VLAN support that I will need from now on. Currently I am using their 6Ghz band exclusively as a wireless backhaul (works fine), clients are supporting WiFi 5 to 6E.

I have a fiber connection with 600/300 mbit, my apartment is roughly 1.100 sqft and the APs will be placed at both ends for additional outdoor reach. The "main" AP will have a wired connection to my switch, the Mesh AP will have a power socket only and needs to stand or lay on a desk or windowsill (or I will need some kind of stand for it)

AI suggested a pair of U7 Pro APs. But I would much prefer advice from experienced users.

The APs will need to be adopted and setup/configured using an instance of the Unifi Network application running on a Unifi console or self hosted
