Mesh connection U7-pro

Question

I have a couple U7-pros incoming and I'm very excited to play with them. They will both be hardwired in my setup.

I'm curious if anyone knows if Ubiquiti will allow for mesh over the 6ghz band. My understanding is that WiFi 7 utilizes all three frequency bands together. How does that factor into the meshing?

In my experience in the field, the meshing over 5ghz has been abysmal with previous APs.

I also ordered 3 U7-PROs that will arrive on Friday and I am worried that this will initially not be support of the box. MLO support will come in "Feb. 2024". And some meshing support based on this will arrive for sure even later. (if at all..)

I read a lot that 6GHz meshing is not good because of the limited range, but having tested some Google Nest Wifi Pro that support WIFI6E and mesh with 6GHz, I can tell that this part worked great for what I needed. (but.. puh.. from flexibility point of view they were are a nightmare)

Did you try this? I was thinking of getting another U7-pro to mesh, but found this on the Unifi site:

<https://help.ui.com/hc/en-us/articles/115002262328-UniFi-Network-Considerations-for-Optimal-Wireless-Mesh-Networks>

"UniFi APs mesh over their 5GHz frequency".

If this is the case, even if the AP puts out a 6Ghz network, you are backhauling on a 5Ghz network... so you might as well just use 5Ghz in that case.

When I tried, it was still only meshing over 5ghz. I'm not sure if they have (or ever will) enabled the 6ghz..
