Best Torrent Client

discussion

Hi all

I aready use the *arr apps with NZB files to download.

Now i will start to use an torrent private tracker (i'm brazilian and it's realy hard to find moves dubed in PT-BR on the Usenet, so i will use the BJ-Share tracker for that)

My question is in your opinion, in 2023, witch one is the best torrent client to use to automate downloads?

They need to be docker-compose images.

Indexers tips will be apreciated as well (prowlarr or jackett or any other)

Now let me make this very clear, this client is by no mean 'good' or 'modern' but it does what i need it to do and it does so very reliably with very little overhead. If you are looking for a no thrills minimal client that you intend to use over a vpn (you should) it might be worth taking a look at.

https://github.com/haugene/docker-transmission-openvpn

I've been using qBittorrent for 2+ years now and I can confidently say it's the best torrent client for your homelab server right now. I've tried using Rutorrrent, Deluge, Transmission in between the course and have faced bugs and eventually quit using it and switched back to qBitorrent. Btw I've noticed qBit takes a bit too much RAM and CPU if you've kept the default configuration. Try to restrict the number of active torrent downloads, bandwidth etc. If your hardware faces too much load from qBittorrent.

Linux Server Deluge or qBittorrent

I've used both and only prefer Deluge because it shows my IP in the web UI and it doesn't fall over when my VPN reconnects

Emaltonator • 2y ago

I like qB too because I never have to open in because the *arrs always know the status of the files.

MadCybertist • 2y ago

I use qbitorrent in Mac and use deluge for Linux and docker.

Also works well with the transmission remote client.

mrpink57 • 2y ago

I think most it seems use qbit, but I have used rtorrent for so long that I cannot use anything else, I use it with the flood front end instead of rutorrent front end.

Also like qbit it is one of the most widely accepted torrent clients for trackers.

FikriChase • 2y ago

Qbit rocks.

⌃ 2 ⌄   •••

Lanten101 • 2y ago

If you need automating downloads schedule, pause, alternative speeds with home assistant. Go with transmission

If you just want a downloader, qbit

pharpe • 2y ago

I used a docker image called haugen that had transmission and OpenVPN built to automatically rate all traffic over a VPN. I used this for years and it was very solid.

https://hub.docker.com/r/haugene/transmission-openvpn

I recently switched to another docker image similar but uses Deluge instead. The main reason was this one has an option to use WireGuard which I heard is faster than OpenVPN. I really haven't seen much improvement in speed though. The binhex has been very solid as well so I didn't see a need to switch back.

https://hub.docker.com/r/binhex/arch-delugevpn

Deluge has more options than Transmission but I really don't use much of it. If you are looking for an all in one torrent client and vpn solution in docker both of these are great options
