Reverse proxy?

Is anyone hosting this in docker behind a reverse proxy? I have the container all set up and saw some threads on it but I can't figure out how to get it to point to my NPM instance.

Possible, but possibly won't increase any security

I don't want it for security. I already have the reverse proxy in so I want it for uniformity between my services

Hey! Just curious. Could you expand on why it wont increase security?

any luck? I am stuck too. I have docker and when I use ip, it works but I want to use NPM as well for outside of LAN help.
