Murdzheff

Local/public ip...

Hi there,

I installed rustdesk natively on one of my servers and all seems to be going well with how it works, however when configuring clients I can't connect to the server using the public IP, only the server LAN ip works, even though the installed scripts configure it for public ip, I can only make them work by changing the config of the client to point to the local IP.

Am I missing something?

redirect traffic targeting that domain at the local server IP instead of out at the internet. That is a DNS problem. How to do both of those things depends on your network equipment and environment.

One of the reason I wrote this: <https://rustdesk.com/docs/en/self-host/nat-loopback-issues/>
