How do i find my server ID?

I have a self hosted server, and that is the machine that i want to connect to. What ID should i use on the client?

Perhaps you mean the Server- IP?!

<http://192.168.xxx.xxx:21114>

your server IP- Address : Port = 21114

there you will be able to manage your server (Web- GUI).

Both are able to work on one machine (Server & Client)

But the client doesnt work on a server machine, possibly because it uses the same ports. Does the server not work as a client itself?

The same way you're connecting to any other machine. What's the difference?

XLioncc • 1y ago

There is nothing called "server ID", only "ID Server address" and "key"

Adamency • 1y ago

No. You're not understanding. You're talking about `rustdesk-server`, but you also need a `rustdesk` service on the same machine if you want to connect to it via Rustdesk. Hence why you also need an ID for that machine which effectively is the "Rustdesk ID" of your "Rustdesk server".
