## Change id server remotely

Hi all,

I have been using RustDesk for a while and I am super happy :) Now I am in the situation where I need to change ID server and add authentication key to several remote computers. But it seems that it's not possible to remotely change this remotely (while connected to a computer).

Is there a way to solve this? Ofc besides having physical access to computer.

Thanks!

Are you talking about the regular "Settings > Network > ID/Relay Server" settings? I do it all the time. What happens when you try?

P.S.: I'm using an old version, I don't know if it matters.

It becomes grayed out ./ Perhaps the easiest way would be to connect to remote computer with anydesk and then make changes in rustdesk.

I will use another remote desktop software to achieve this haha

rustdesk.exe --config <config-string> Just set one client up with the new settings, then copy from the Network tab and replace <config-string> with the copied value. Run the command on every endpoint and you're done. I had a self hosted RustDesk server and moved to an Oracle hosted machine. Config was pushed from my RMM but any method should suffice.

I always have a secondary remote software like Anydesk just for things like this. Then I can do minor updates like this in Rustdesk without getting kicked out or locked out. Plus during any downtime that may occur I have a backup connection.
