Captain-H2O

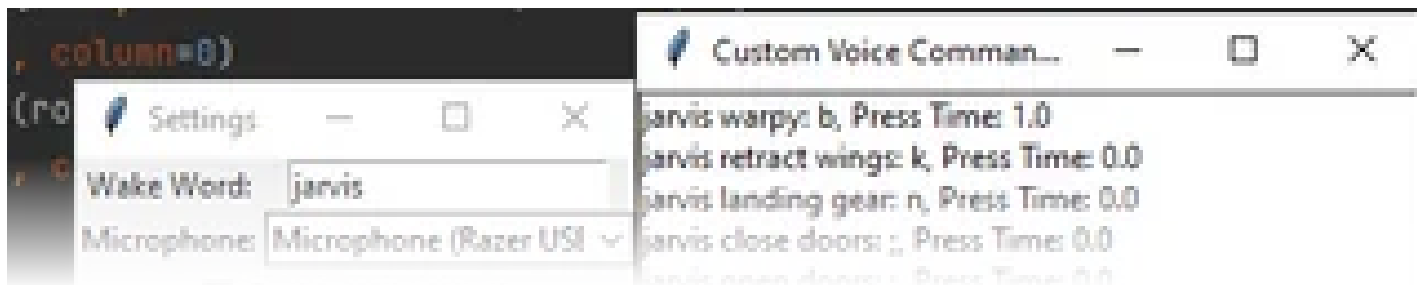

Open source alternative to voice attack?

DISCUSSION

EDIT: ADDED THE GITHUB SOURCE CODE WITH A WINDOWS RELEASE.

https://github.com/techsavvy42/Captains_Voice_Commander

I've been working on a python project that I would like to release to the public open source here in a day or two via github, but I was also curious to get some opinions from you guys on it and maybe get a few suggestions?

Very cool project! I'm learning python myself and would love to take a look at the source code haha.

these are pretty cool projects as well! Yes I have tottally considered and most likely will be intergrating some sort of AI system like OpenAI's chat GPT as either an add-on or and option you can enable. As ive tested and done similar projects in past this has a pretty big latency doing this. As it is now this is ultra low latency nearly instant command response. I was thinking more along the line of making and using some sort of custom GPT now that they have released them, this way I can tailor the GPT to be specific for starcitizen use case, And i can provide images/maps. External sources/apis and links that it can use in a more efficient manner. And considering it will be a open source project makes all the morse sense as users will be supplying their own api keys :)

it would be cool if it could tell you the sunset or sunrise information. like if you are on your way to a location you could say jarvis what is the time of day at my destination. i currently use the verseguid website to obtain this info. if i could quickly get this info, it would allow me to determine which mission to accept(because i hate flying on the dark side)

could use over your game screen. Much the same idea i have with sc-trade-tools. this way you dont have to leave the game to open a browser or go to a webpage. And with it being planets its much easier to get away with. compared to some of these really complex commoditie names that will still have you manually search through the sc-trade-tools regardless. Unless you create your own custom command that takes you too a specifc page when you say 'jarvis yela' or 'jarvis price of iron'.

**HeronII** • 1y ago

Cool project!

**Captain-H2O** **OP** • 1y ago

Anyone still following this reddit, I just released it on github. nothing too crazy as this is one of my first projects that I've released so don't expect it to be perfect. Their is plenty of little things that I still need to fix/add, but as of right now it works pretty flawlessly on both windows 10 and windows 11.

I included a windows release for people that do not want to fiddle with the source code but would still like to jump straight in and try the program. So dont worry if you dont know how to code or set up python, you can go to releases and download the windows release for it instead.

Would be great to use a different speech engine for use on linux with other games. Mozilla DeepSpeech comes to mind but I have no experience with it. I think I'll change that.

****Edit:** <https://github.com/mozilla/DeepSpeech/issues/3693>

DeepSpeech is no longer maintained, as of quite some time ago... guess I've been under a rock for a while :-/
