Copy and Paste Tampermonkey Script

I was very annoyed at not having copy/paste in Proxmox console, so I made a small tampermonkey script to allow it:

[Copy/Paste for noVNC Proxmox \(github.com\)](#)

To install: Install Tampermonkey in your browser, then click "Raw". There will be an option to install. Adjust your matching URLs accordingly.

To use: Copy some text to your clipboard. Click anywhere in the console and then Right Click (like a normal console would).

Please leave me a comment if there's a problem or a star if it helps you :)

```

Any way I can help troubleshoot?

Ah, I don't personally use Firefox, so I wasn't really looking at compatibility there (I think every other browser supports the `clipboard.readText`)

From this page https://developer.mozilla.org/en-US/docs/Web/API/Clipboard/readText#browser_compatibility : Firefox only supports reading the clipboard in browser extensions, using the "clipboardRead" extension permission.

You might try replacing the `navigator.clipboard.readText` with `navigator.clipboardRead` in the extension text and see what happens.

Control + Insert to copy, Shift + insert to paste

(might be wrong way round sorry)

anyways you're welcome 🙌

(edit: formatting)

That's great thanks!

On a similar line I discovered just last week the app ClickPaste. Does basically the same thing, converts copy/paste into keypresses so works where copy/paste wont.

<https://github.com/Collective-Software/ClickPaste>

Yeah I had thought of using something like AutoIt or another outside script, but I wanted something that was a browser plugin to keep it contained and portable. I figured if I ended up going to an external program, I could use one of the SPICE's or xterm.js or something.

Genial me ha servido demasiado, mi host es windows y funciona a la perfección. en caso de que el host se un linux habría que buscar otra alternativa?

It's really nice. But I have 1 small issue. The script does not take other keyboard layouts into consideration. I have czech layout. So when I copy for example "sudo apt update && sudo apt full-upgrade" the script types out "sudo apt update 77 sudo apt full=upgrade". Other than that it works really well

Edit: I looked into the code and it should be an easy fix for me (add numbers to regex). Not the best solution, but hopefully work for me. Will come back later with the results.
