error joining cluster

joining 3 new nodes to my cluster to make an HA setup, 2 nodes added just fine, but the third is a little funny.

it shows up with a green check in the datacenter view, but if you click on it every screen gives a connection error.

journalctl -f shows a repeating error "pveproxy[2770]: /etc/pve/local/pve-ssl.key: failed to load local private key (key_file or key) at /usr/share/perl5/PVE/APIServer/AnyEvent.pm line 1943."

i can confirm there is no file at /etc/pve/local/pve-ssl.key. there appear to be a few files missing from this directory comparing to the other nodes.

EDIT: i found it... pvecm updatecerts -f was the command i was looking for.

Whenever I have had trouble joining a host to a cluster it's been due to versions not being *exactly* the same (including patches). I would double-check that.

(Edit: Typo)

I dont know exactly your setup but double check your connectivity, also add nameserver of nodes on each nodes and ping them, the problem with ssl have you installed nodes with the same hostname? you cant join nodes if they have resources(vms,lxc,templates) you need afresh install or you should some how backup them to a nas and empty the node after joining restore them.also you should double check if you have a problem with local dns server.
