Windows VM Installation - No Storage Recognised

Solved!

Hi Team,

Bit of a mystery to me, i've been struggling getting the windows installer to recognise the VirtIO drivers for a while and eventually gave in to just using an IDE device instead - but now that i've tried that, it doesn't work either.

Proxmox support forums basically loop back to 'install VirtIO drivers' for any missing storage during windows insatllation concerns, but now that isn't my only concern.

You try running in UEFI mode instead of SeaBios?

The Proxmox support forums loop back to the only sane answer. Describe the problem you're encountering with the driver installation so you can focus on fixing the actual issue. Using IDE for fixed disk is truly wack.

And yet, IDE *should* work natively. The fact that it doesn't, not do the instructions for loading virtio, suggests there is another problem.

Which is why I'm here asking the question

Yep, no difference. The issue is less now that i cant install VirtIO drivers (although that *is* annoying) and more that windows cant even see the IDE device

Try browsing each level of the virtio subfolders.They are there.
