Best transcoding GPU in 2022.

[Help](#)

Back in 2020, I jumped on the Quadro P2000 bandwagon and it's been great! I've been successfully transcoding 4K content on the fly ever since, and I've been upgrading files in my library to 4K ever since.

My next project is an Unraid box that's dedicated to Plex, Emby, and Tdarr. What GPU is everyone raving about these days? I'd like something that is ≤ 75 watts.

processor with Quicksync for hardware transcoding. It will give you transcoding performance as good or better than a P2000 with much lower energy use. 11th and 12th gen Intel are not yet fully supported by Unraid but supposedly coming soon.

GoodyPower • 3y ago

This, coffeelake or higher igpu

Hardware transcoding and hardware tone mapping (adding about a year ago) makes this an amazing solution with minimal power draw.

I bet that works really well. I'm looking for something that outperforms a P2000 in some way, while staying withing a 75w budget.

GTX 1060, you can find them used for ~\$100 and with an unlock script (w/o you can only have 3 at a time) you can run plenty of plex transcodes, esp if you get the 6gb version
