Intel HD 530

Read edit at the bottom.

Before I start, I just want to say that I know nothing about computers. Don't criticize me or tell me to get something better. Now, then:

For several days, I've been looking for an Intel HD 530 graphics card. I've looked everywhere, and I can't find a place to buy one. As far as I can tell, it's supposedly like Fallout 76: everybody hates it except for a few YouTubers trying to explain why it's "actually good." I really don't care. All I know is that it's one of the minimum specs to play a certain game, and I don't want to pay for anything more expensive. Where can I buy one of these? I'd prefer to buy one new or refurbished— nothing classified as "like new," because who wouldn't say that when trying to sell a product? I don't care about the price of one right now, just throw any links you can find at me and I'll try to decide. Thanks in advance!

Intel hd graphics, you need to buy an Intel CPU that has it. What are you using it for? It won't do shit all for gaming or content creation. I suggest you get a dedicated gpu like a gt 1030 or a RX 550.

Basically Intel graphics aren't discrete graphics card, rather built into a CPU. You shouldn't be fussed about what integrated CPU you have for Intel chips, as performance for pretty much anything won't improve much. The only thing I can think of is a htpc setup where a decent integrated gpu will be all you need for 4k streaming etc.

HD530 is an integrated graphics unit, meaning it is part of a CPU. It was mostly a part of the Skylake series of Intel CPU's.

You should not expect to be able to play any games using this GPU, unless you're looking at 10-15yr old games.

Sorry, I know nothing about computers, like I said. So you're saying that some CPU's... come with one built in?

Don't tear me apart with words if I sound extremely stupid, but I also ordered an Intel Core2 Quad Q6600 chip. You already know I'm not an expert, but I don't think a little chip like that can fit a graphics card in it. Am I right or wrong or really wrong?

Edit: If this doesn't work, is there anything slightly better with the graphics built in?

the only you can get this gpu is to buy a cpu that it is built into. they DO NOT sell this gpu separately by itself. to get this gpu you need to buy a cpu that has it so there's no reason to get it. buying said cpu is not worth it as the i7 6700 goes for around \$100 on ebay, which you can use to buy a solid 1080p gpu used from ebay or [r/hardwareswap](#).

That CPU does not have any integrated graphics. With it being from 07 it's not going to work well with any modern games.

Reason why it doesn't have integrated graphics is because it's a CPU catered to the gaming audience who would be using a dedicated GPU

ashtonggilmore • 6y ago

Integrated graphics are still graphics but not a graphics card. Integrated graphics are the same as graphics cards functionally, but cards contain VASTLY more powerful components that require more space and dedicated fans for cooling.

It would help if you could tell us the game as well. Integrated graphics are unlikely to run anything newer than early 3d games like quake or doom and simple arcade style games.

As for what would be more powerful, we can only suggest newer and almost certainly more expensive hardware which you seem strongly against.

He's got to be trolling us. Why would someone buy a Cpu from 2007 except to go in a museum?
