## Is it possible to play Destiny 2 in Windows VM?

[emulation](#)

As is written on the Steam page (under "Steam Deck support"), Destiny 2 doesn't support Linux even when using Proton, because of the game's anti-cheat. But is it possible to use Linux with Windows virtual machine to play the game? I'm asking because I don't want to run Windows natively, but my friend wants me to give this game a try.

Thing is - at the start, for few days, Destiny 2 used to work great, even BE worked. It's just Bungie who made the game specifically incompatible with Proton/Wine ONLY.

As for VM - nope, anti-VM measurers. You'd have to run Windows machine on KVM and another one inside on Hyper-V, that *may* work, but you'd most probably get banned. And I wouldn't count on D2 on Linux anytime soon, anyway as long as those dumbasses at Bungie call Linux gamers "dirty hackers"...

Even if Destiny uses Anti-VM features, its not perfect and it will be possible to bypass, just be careful if you do.

You should be warned, in the past I believe Bungie has said no support for Linux. And Linux users has claimed to be banned.

The odd thing was Stadia. Stadia was running on Linux but I suppose a deal was made in between the two parties.

So we are stuck in this dilemma and Bungie with the lawsuits (resources spent on the lawyers they had to deal with legal issues). Maybe a few years in a Linux port or proton support will come up...

[Skip to main content](#)[Log In](#)

The issue is not Linux itself Bungie have a problem with. It's running the game off a platform they don't officially support and control which is the issue.

Stadia was purely server-side so they only need to trust Google.

I don't think this is justified as well but it is easy to see their point of view.

I don't know if Destiny's Anti-Cheat has any Anti-VM features, i'd suggest asking on [r/vfio](#).

The tricky part is the GPU pass-through to the VM. I am not sure if it's even possible on the.

Does GFN have a Linux version? (GeForce Now=GFN)

Edit:: it's free to try and see

So I guess your best bet is some streaming service like Geforce Now...

Bungie is the bitch for treating Linux users like dirt. They should be ashamed.

For some reason they even make Blizzard look good (Blizzard will often claim their ban on Linux WoW players are accidental and they're usually reverted almost immediately after the complain is filed). Bungie spits in the face of Linux users and call us cheaters.

No, I seem to recall Destiny 2 does not work in a Windows VM, the anti-cheat will recognise that, and fail to launch the game.

↑ 1 ↓ [Reply](#) ...

**eazy\_12** • 2y ago

[Post for the /r/VFIO \(from 2020\)](#) suggests you could play it and seems like they didn't ban for that. But from that time Bungie became more serious about cheaters and maybe it changed.

If you have a PS/Xbox you can crossplatform with your friends.

Trying to use a VM to play an old game, but it won't show a rendering device in the drop down to launch. Never used a VM before so anyone know what I'm doing wrong?
