Frigate Nginx reverse proxy

Hi,

I am having issues with setting up reverse proxy to access my Frigate instance remotely. This has been working fine before Frigate v14 with new port for log in. Official documentation https://docs.frigate.video/guides/reverse_proxy/ mentions only setup steps for Nginx, but how do I translate that to Nginx Proxy Manager?

Hi,

Tell us more about your infra. Is npm on a docker container, is frigate on docker container ? What's your os ?

Reply

gacekk8 OP • 8mo ago

Both are run as docker containers with same IP but different ports. Locally I can access Frigate via the IP with the given port number. Other apps run in same IP docker containers are successfully working via the npm. Issue is only with Frigate since reverse proxy needs to be set up

“http://frigate:8971” on NPM. More is not needed

Figured it out. I had to disable tls in frigate configuration. Then just use http like you mentioned
