Intel Quick Sync in Docker

[Help](#)

Hi,

I followed the steps of <https://docs.linuxserver.io/images/docker-plex> and added the following to the docker-compose file:

```
devices:
```

```
- /dev/dri:/dev/dri
```

Unfortunately I don't see that hardware-transcoding is working. The Plex container is running on an up-to-date Ubuntu 22.04 on Proxmox. The Proxmox server has an [Intel i7-8700 Processor](#) which supports Quick Sync. For the Processor type in Proxmox I choose *"host"*.

Did you setup Proxmox to passthrough the iGPU to the ubuntu VM?

fwiw you might want to run it on an lxc directly not in a docker inside a vm

<https://herold.space/proxmox-lxc-intel-quick-sync-for-plex/>

Spyronia OP • 2y ago

Thanks! I have been thinking about that too. Can you elaborate why I would choose for LXC over Docker in this case?
