Radarr Supported

Table of Contents

⚠️ This page is a work in progress and requires additional effort.

This page is the disambiguation page for all `supported` wiki links (i.e. typically "more info" in the UI).

  - ▶ [Refer to the Settings Page](#)
- ▶ uTorrent
  - ▶ [Refer to the Settings Page](#)
  - ▶ Due to utorrent being adware and formerly spyware, it is not recommended. Most users use Qbittorrent.
- ▶ Vuze
  - ▶ [Refer to the Settings Page](#)

Indexers

Usenet

- ▶ Newznab
  - ▶ [Refer to the Settings Page](#)
  - ▶ Newznab is a standardized API used by many usenet indexing sites. Many presets are available, but all require an API key to be accessible.
  - ▶ Indexer Applications like [Prowlarr](#) and [NZBHydra2](#) ↗ can provide advanced capabilities such as stat tracking.
- ▶ omgwtfnzbs
  - ▶ A defunct legacy implementation of a private usenet indexer. Use Newznab instead.
  - ▶ [Refer to the Settings Page](#)

Torrents

- ▶ FileList
  - ▶ Private Tracker

▶ [Refer to the Settings Page](#)

- ▶ HDBits

  - ▶ Private Tracker

  - ▶ [Refer to the Settings Page](#)

- ▶ IP Torrents

  - ▶ Private Tracker

    > ℹ IP Torrents' native implementation does not support Search. Use it via Prowlarr or Jackett as torznab instead

  - ▶ [Refer to the Settings Page](#)

- ▶ Nyaa

  - ▶ Torrent Tracker for Japanese Media (Anime) exclusively.

    > ℹ Nyaa frowns upon automation and frequently will ban your IP.

  - ▶ [Refer to the Settings Page](#)

- ▶ Pass The Popcorn (PTP)

  - ▶ Private Tracker

  - ▶ [Refer to the Settings Page](#)

- ▶ Torrent RSS Feed

  - ▶ Generic torrent RSS feed parser.

    > ℹ The RSS feed must contain a `pubdate`. The release size is recommended as well.

  - ▶ [Refer to the Settings Page](#)

- ▶ TorrentPotato

  - ▶ A legacy Couchpotato pre-Torznab format.

  - ▶ [Refer to the Settings Page](#)

- ▶ Torznab

  - ▶ Torznab is a wordplay on Torrent and Newznab. It uses the same structure and syntax as the Newznab API specification, but exposing torrent-specific attributes and .torrent files. Thus supports a recent RSS feed AND backlog searching capabilities. The specification is not maintained nor supported by the Newznab organization. (The same API specification is shared with nZEDb)

  - ▶ This is primarily only supported by [Prowlarr](#) and [Jackett](#) ⧉

► [Refer to the Settings Page](#)

> ⚠️ Many torrent trackers thrive on the community and may have rules in place that mandate site visits, karma, votes, comments, etc.
> Please review your tracker rules and etiquette, keep your community alive.
> We're not responsible if your account is banned for disobeying rules or accruing Hit and Runs (HnRs)/low-ratio.

Notifications

► Boxcar

► Custom Script

  ► This allows you to make a custom script for when a particular action happens this script will run. See [Custom Scripts](#) for more details.

► Discord

  ► By far one of the most common ways to push notifications of actions happening on your Radarr

► Email

  ► Simply send yourself or somebody you want to annoy with email. If you're using Gmail, you need to enable less secure apps. If you're using Gmail and have 2-factor authentication enabled you need to use an App Specific password.

> ℹ️ You can use a "pretty address" like `SomePrettyName <email@example.org>`

► Emby

► Gotify

► Join

► Kodi

  ► Kodi spawned from the love of media. It is an entertainment hub that brings all your digital media together into a beautiful and user friendly package. It is 100% free and open source, very customizable and runs on a wide variety of devices. It is supported by a dedicated team of volunteers and a huge community. By adding Kodi as a connection you can update Kodi's library when a new movie has been added to Radarr.

► Mailgun

► Notifiarr

  ► See the entry on [Useful Tools - Notifiarr](#)

► Plex Media Server

- ▶ The server for your self hosted Plex system, Enabling this is much like Kodi will allow you to push an update to your plex server notifying it that a new/upgraded movie is available.

- ▶ This is rarely needed and is only required if Plex is unable to watch the file system for changes.

- ▶ In the handful of situations where Plex is unable to watch the file system using ionotify - such as certain types of remote mounts and a handful of older network mounts - it is suggested to use the app plexautoscan rather than the Plex connection

- ▶ A use a tool like [plexautoscan](#) ☒ is another option.

- ▶ Prowl

- ▶ Pushbullet

- ▶ Pushcut

- ▶ Pushover

- ▶ SendGrid

- ▶ Slack

- ▶ Synology Indexer

- ▶ Telegram

- ▶ Trakt

- ▶ Twitter

  - ▶ See this [Tips and Tricks entry](#)

- ▶ Webhook

Lists

- ▶ CouchPotato

- ▶ Custom Lists

- ▶ IMDb Lists

- ▶ To add your IMDb Watchlist, go to your list and click edit. Make sure privacy setting is set to public. In the address bar you will find the `lsxxxxxx` number that you will need to enter into Radarr

  1. Go to your IMDB List Settings

  2. Ensure Privacy is set to `Public` (i.e. `Disabled)`

  3. Use the `ls` number within the URL

- ▸ Plex Watchlist

  - ▸ Requires: v4.1.0.6176+

  - ▸ Simply add a Plex watchlist for the authenticated Plex user to Radarr. Note that it's required that your list contain movies on it.

  - ▸ To have multiple user's watchlists you'll need to add each user's lists and authenticate with their Plex user.

- ▸ Radarr

  - ▸ TRaSH has a guide ☑ for syncing two instances

- ▸ RSS List

  - ▸ This list format inherit from old IMDB RSS feeds. It only needs a title and a year which can be useful for non-enriched data.

> " Year is directly parsed from the title tag value

Here is a sample data :

```
1   <rss>
2     <channel>
3         <title>My custom RSS list</title>
4         <description></description>
5         <link>http://example.com/rss</link>
6         <lastBuildDate>Sun, 16 Jun 2024 13:54:33 GMT</lastBuildDate>
7
```

```
 8          <item>
 9              <title><![CDATA[ Tehachapi (2023) ]]></title>
10              <guid isPermaLink="false">Tehachapi (2023)</guid>
11          </item>
12          <item>
13              <title><![CDATA[ Dissidente (2023) ]]></title>
14              <guid isPermaLink="false">Dissidente (2023)</guid>
15          </item>
16        </channel>
      </rss>
```

▶ StevenLu Custom

   ▶ Allows you to create custom movies lists in json format.

      Your feed requires for each movie either a `title` or an `imdb_id`, both can be provided.

      > Note that `imdb_id` is safer than `title` as it does not require a broad search
      > Here is a sample valid json :

```
 1   [
 2       {
 3         "title": "The Wastetown",
 4         "poster_url": "https://www.themoviedb.org/t/p/w300_and_h450_bestv2/6J3⋮
 5         "imdb_id": "tt22889064"
 6       },
 7       {
 8         "title": "Wild Sunflowers",
 9         "poster_url": "https://www.themoviedb.org/t/p/w300_and_h450_bestv2/tHK⋮
10         "imdb_id": "tt13774830"
11       }
12   ]
```

   ▶ Additional keys can be added in items (will be ignored)

   ▶ For an empty list just return an empty json array `[]`

▶ StevenLu List

▶ TMDb Collection

   ▶ Collection Lists are no longer supported in Radarr v4.2 and have been migrated to collections within Radarr.
      See the Collections section for more details.

▶ TMDb Company

▶ TMDb Keyword

▶ TMDb List

▶ TMDb Person

- ▶ If the TMDb Person url is `https://www.themoviedb.org/person/500-tom-cruise` then the Person ID is `500`
- ▶ TMDb Popular
  - ▶ Top uses https://developers.themoviedb.org/3/movies/get-top-rated-movies 🗗
  - ▶ Popular uses https://developers.themoviedb.org/3/movies/get-popular-movies 🗗
  - ▶ Theaters uses https://developers.themoviedb.org/3/movies/get-now-playing 🗗
  - ▶ Upcoming uses https://developers.themoviedb.org/3/movies/get-upcoming 🗗
- ▶ TMDb User
- ▶ Trakt List
  - ▶ Username - Ensure you enter the actual username of the user and not the user's name
  - ▶ List - Ensure you use the list name as presented in the list URL
  - ▶ Example: `https://trakt.tv/users/some-user-name/lists/trakt-list-name?sort=rank,asc`
    - ▶ Username: `some-user-name`
    - ▶ List: `trakt-list-name`
- ▶ Trakt Popular List
- ▶ Trakt User
  - ▶ This type should be used when using your own watchlist

Metadata

- ▶ Emby (Legacy)
  - ▶ Enable - Enable metadata file creation for this metadata type
  - ▶ Movie Metadata - Enable metadata file creation for this metadata type
- ▶ Kodi (XBMC) / Emby
  - ▶ Enable - Enable metadata file creation for this metadata type
  - ▶ Movie Metadata - Create a `<filename>.nfo` with the movie metadata
  - ▶ (Advanced Option) Movie Metadata URL - Create `movie.nfo` with TMDb and IMDb movie URLs
  - ▶ Metadata Language - Select the language Radarr should use to write the metadata if available in that language
  - ▶ Movie Images - Create various Season images including posters and banners
  - ▶ Use Movie.nfo - Write the nfo file as `movie.nfo` rather than the default
  - ▶ Collection Name - Radarr will write the collection name to the .nfo file

- ▶ Roksbox

  - ▶ Enable - Enable metadata file creation for this metadata type

  - ▶ Movie Metadata - Create xml file for each movie

  - ▶ Movie Images - Create `Movie.jpg`

- ▶ WDTV

  - ▶ Enable - Enable metadata file creation for this metadata type

  - ▶ Movie Metadata - Create `<filename>.xml` for each episode

  - ▶ Movie Images - Create `folder.jpg`
