Debian LXQT Autologin

Hi

i have Debian 11 with lxqt DE installed. I use it as a thin client and i want to enable autologon for the user "user". Of course i googled it and only found guides that dont seem to apply to my configuration?

If you know any good guide please tell me.

LXQT, no LXDE.

If it is SDDM, you need to create a text file: `/etc/sddm.conf.d/autologin` with following content:

```
[Autologin]
User=user
Session=lxqt.desktop
Relogin=
```

*The `Relogin=` may be set to true in order to immediately again autologin after logoff, if its false or left blank, SDDM will autologin only after boot.
