Good firewall software for windows?

Looking for software  

What windows firewall are you all using and recommend that's also easy to work with? Need a firewall to improve privacy, white list and blacklist certain applications when using a vpn.

Ever Since Microsoft started including a decent firewall some of the options have disappeared. There is always **Windows Firewall Control** <https://www.binisoft.org/wfc> to configure the built in firewall. The other options still available in 2024 are **TinyWall** <https://tinywall.pados.hu/> or **PortMaster** <https://safing.io/> or **Fort Firewall** <https://github.com/tnodir/fort> or **Evorim Free Firewall** <https://www.evorim.com/en/free-firewall> or **Comodo Free Firewall** <https://personalfirewall.comodo.com/> Back in the Windows XP days Comodo came onto the scene with a very innovative free firewall that also included HIPS functionality which would help block unknown programs and was very configurable. I haven't tested it of late but it has very good reviews at one point. I have tested Portmaster and it works fairly well (the free version); it even blocks ads out of the box. If you could create a VM for testing I would so you can try them out and choose the best options for you. Good luck with your search.

Windows Defender is not enough? Maybe Comodo: <https://www.comodo.com/home/internet-security/firewall.php>
