Veegos

All the "arr" applications

[discussion](#)

Does anyone have a list or place I can find out about all of the available 'arr' applications?

Currently using:

- Sonarr
- Radarr
- Lidarr
- Prowlarr

I'm interested to see what else is available.

There's the Servarr wiki for the *arrs; <https://wiki.servarr.com/> The ones I know of that you didn't list are Bazarr for subtitles, Readarr for books and audiobooks and Whisparr for porn.

And you also have Profilarr which is a simple Python script for managing custom profiles in Sonarr and Radarr

fliberdygibits • 7mo ago • Edited 7mo ago

There is also Bonarr for porn

Edit - Apologies, I hadn't actually looked at the git. It is a thing but hasn't been maintained in 7 years.

not technically an arr application, but <https://nzb360.com/> is worth a mention, its great for managing all your arrs from an android phone.

MediaStack is a docker compose project that helps rapidly deploy all of the *ARR applications, Gluetun VPN, SABnzbd, qBittorrent, Portainer and many more docker apps, to get you up and running quickly.

All of the settings are stored in a single ENV file, ensuring you have consistency throughout your docker builds, and its super easy to change settings on a application port, folder location, as its all in one location (ENV file).

The folder structure also suits atomic moves / hard links, and is set up consistantly across all your docker containers.

GitHub: <https://github.com/geekau/mediastack>

Documentation: <https://MediaStack.Guide>

Sub: [r/MediaStack](#)

Its extremely easy to add additional docker containers / applications to your stack.

Hope this helps.
