Passthrough motherboard information/ANTI-VM?

Support

so I need to run this app in my WIN10 vm, but it has some sort of "anti-vm protection" where it needs to see your motherboard specs, is there a way to do that or will I have to (god no) dual-boot?

Despite the fact that it's a vrchat page, this page contains extremely helpful info on spoofing a vm to the point where it can fool easy anticheat, and from my experience, other anticheats like genshin impact's.

<https://docs.vrchat.com/docs/using-vrchat-in-a-virtual-machine>

Edit: forgot to mention that it basically is a guide on how to spoof a motherboard in a vm using your motherboard information

Wait is this official VRChat docs? Did they really teach people how to bypass their own anticheat software?

I'm sensing a corporate infighting.

ok, so i followed the guide you sent me, but when using cpu-z (inside the vm) it appears as if the information regarding the motherboard is still broken...(and the app i need to run is still not working)

here's my <sysinfo> section

```
<system>
```

```
<entry name="manufacturer">ASUSTeK COMPUTER INC.</entry>
```

```
<entry name="product">PRIME B450M-GAMING/BR</entry>
```

```
<entry name="version">X.0x</entry>
```

```
<entry name="serial">MB-123456789 (this is the actual "serial" according to dmidecode)</entry>
```

```
<entry name="uuid">(very long and no point to post)</entry>
```

```
<entry name="sku">Default string (in dmidecode it just says "SKU")</entry>
```

```
<entry name="family">B450M</entry>
```

```
</system>
```

```
<smbios mode="host"/>
```

Works for me with most anti tampering software
