Comet vs. JetKVM

[Discussion](#)

With Comet being available for sale soon, was wondering if those who have the Comet from the beta testing could comment on how well it works. Especially keen to hear if you also have tried the JetKVM and how it compares.

With JetKVM retailing at \$70, and having that nice display screen, trying to better understand where the Comet shines.

Thanks!

Everybody is asking that even [this](#) guy yesterday but i think they are still trying to catch up with the deliveries because they did say they would launch it on Amazon in February but we are already in March.

I already have one but want another one :)

Someone in the Discord said they were interested to do a comparison of Comet vs. JetKVM. Maybe they'll do a write up and we'll post it to the blog. Let's see.

One big difference is that JetKVM appears to be web-based while Comet requires an app. They currently have apps for Mac and Windows. JetKVM does not have nor need an app.

But their website shows "Mobile/Desktop application support". Then.. they should have iOS and Android 🤔. Is the application required just for access the remote host? Or is required to perform some kind of configuration on the host that will be accessed remotely later?. I'm curious if they also support WebRTC as JetKVM.

When I use jetkvm, I cannot load images correctly using Firefox. Some people in the community say that this is a problem with browser compatibility settings. Everyone has different preferences. Relatively speaking, I prefer applications, which have better compatibility and can easily support mobile access.

I have the JetKVM and i have to say the product, software, community and developers are really great. Can't complain for the price. Cosmet is also open source like JetKVM which is a plus point but besides the higher resolution and audio support i don't see extra benefits of Cosmet.

And not sure what the pricing will be but if it's the same or higher than JetKVM i don't see the point of Cosmet. The full size HDMI and not have to use adapters for power split is nice.

The beta testing is going for 2 months now? Wondering when they will go out of beta and release it. I hope it will succeed and can compete against JetKVM and NanoKVM.

Edit: Would be nice if they add PoE because that is something that are a lot of people asking for.
