Calsem

access denied when trying to use bootrec /fixboot to fix my corrupted win10 boot

Solved

Backstory: I somehow corrupted my windows EFI partition on my SSD when cleaning my HDD (no idea how it happened, I never even touched my SSD).

When I start windows I get error code 0xc000000e (A required device isn't connected or can't be accessed), so I have to go into recovery mode.

Some guides I found online say to use bootrec /fixboot but it give me access denied. I tried a whole bunch of other stuff and also got errors. See this pastebin: <https://pastebin.com/GhNEDh29>

EXTRA important that you select boot to the usb UEFI option! Once I did that stuff started working again. To get my SSD back up and running I did the following:

boot to UEFI recovery usb

launch cmd

bootrec /ScanOs (you should find an instance)

bootrec /FixMbr

bootrec /FixBoot (if you get error, do bootsect /nt60 SYS and try again)

bootrec /RebuildBcd

Thanks to @Jan-Philip Gehrcke for the tip! (see [Problem recreating BCD on Windows 7 64bit - The requested system device cannot be found](#))

Thanks mate!

Still helpful as of April 2022...

(apologies for necro 😊)

My Boot setting(type) is UEFI only and No legacy. I boot in usb by continuously pressing f12 and then selecting usb as the boot device.
