VMWare Fusion Personal on Mac with Apple Silicon can't run Win11?

Hello,

I switched to a Mac with an M1 Max Chip and now I can't boot into Win11. Any suggestions on how to get this working?

Error message: This virtual machine cannot be powered on because it requires an X86 machine architecture that is incompatible with this Arm machine architecture host. See KB-84273.

Use the built-in "Get Windows" feature, we put a lot of love into it :)

There's a button for it in the New VM dialog screen.

Dear,

could you tell me how to use this Built-in ? I am really in trouble to run windows on my M2.

I love the built-in Get Windows feature as it works perfectly, however I would like to download Windows 10, and the only available option is Windows 11. Is there any other way to get Windows 10? (I am on an Apple Silicon device)

I tried this and it didn't work, I then tried downloading the latest ARM version of Windows 11 (beta) on Microsoft's site and got the exact same error as OP, both times.

Your error message tells you - that's not AMD64 or x86 that you're running on. You're on ARM64.

bossman118242 • 1y ago

create a new windows 11 vm with the download windows 11 button on the start page of fusion

If you have a pre-existing Windows 11 VM, it will not work on a system with the new M1 chip.

You need the Windows 11 for ARM install. It will not work with Windows 11 64-bit.

praetorfenix • 1y ago

You aren't going to be able to. You need Win11 for arm.

What everyone else said, and you should know the same applies to Linux OS as well. M-series processors are all ARM64 architecture so choose ARM64 versions of the OS.

That said, the ARM64 version of Win11 running as a VM will run x86-64 Windows applications.

The built-in feature doesn't work with Apple Silicon most the time. You need to start the CD/DVD first, and reinstall Windows from there.

**FELTRITE** • 9mo ago

Same issue here!

Just with a linux vm of a vendor OS that is x86 based :|

Help would be much appreciated - what do i do in this scenario?

**b-double-u** • 8mo ago

Why does the creation of a virtual machine force you to type out the key?!? Why would you not allow that field to copy paste??? This is insane.

I have a Win 10 bundle that has key software loaded. Copied from another machine. Is there no way to run this VM on a mac with Apple silicon?

I install everything correctly but when I press the play button and get to the "Press and key to boot from CD/DVD..." and I do it just goes right back to the play button. Any one have a fix for this?

**miltonmix** • 3mo ago

I have a problem... i can't sop7pause the windows virtual machine created... and it don't work anymore. What can i do?
