The opkg update command failed with code 6 - I am stuck

I have been running OpenWRT for years and more or less the same setup, very standard and the only stand out is that I am running a Wireguard client on the router itself. Been zero issues. However, I tried to update the software the otherday and got error "The *opkg update* command failed with code 6." Went in via SSH and similar issue when running opkg update:

```
root@OpenWrt:~# opkg update
```

```
Downloading
```

```
https://downloads.openwrt.org/releases/23.05.0/targets/mvebu/cortexa9/packages/Packages.gz
```

```
*** Failed to download the package list from
```

```
https://downloads.openwrt.org/releases/23.05.0/targets/mvebu/cortexa9/packages/Packages.gz
```

```
Downloading https://downloads.openwrt.org/releases/23.05.0/packages/arm\_cortex-a9\_vfpv3-
```

opkg has been deprecated by the openwrt team and has been replaced by apk.

you need to update your version of openwrt to the newer version which uses apk instead of openwrt.

Is the time on the device set correctly? If not maybe run ntpdate?

  1   Reply ...

snorkfroken__ OP • 5mo ago

Yes, time and time zone is correct.

I'd check the date and time on the router 1st.

Yes, time and time zone is correct.

Gonna check the thread!

The APK package manager is now the default package manager in OpenWrt main.

The last 24.10 release candidate to be tagged on Wednesday, and 24.10.0 final about a week later. If you've found bugs they don't know about, now's the time to report them.
