How to merge two videos in macOS Big Sur, M1 chip

How did they do that?

I want to merge three .mov files in my macOS Big Sur(11.6), Apple M1.

I tried to merge firstly two files using quick time player, I couldn't merge. What could be the problem?

1. A.mov - 237 MB - 1920*1080
2. b.mov - 10.1 MB size - 1920*1080
3. c.mov - 8.8 MB size - 640*360

Can you suggest me other alternatives to merge all these three ?

Videos 1 and 2 you could merge losslessly with FFmpeg/Shutter Encoder, providing they're the same codec.

Video 3 can't be merged like that, as the resolution doesn't match.

So upscale video 3 to 1080p in the same codec as videos 1 and 2, then you can merge all three which will at least be lossless for the first two videos.

- Frame rate.

All the clips have to be *identical* on these two factors.

You can *edit* those clips together, which will be a re-encoding - **see our software thread for details**.

You mean assemble, right?

Any video editor, including iMovie can do it.

If you have Adobe Media Encoder, assembling without a Timeline is a stitch (not to be confused with stitching panoramic video). Drag and drop the clips to the lower right of the Queue tab for the stitch option.

For best results with little or not effort, the clips being assembled/stitched should be the same frame size and same frame rate.

You can use Topaz Video AI to up-convert the “c” clip from 640-by-360 to 1920-by-1080. It may be a slow render, but it’s probably going to yield the best results of what’s currently available.

I'm trying to add an effect to an existing video in photo booth as opposed to adding an effect on the fly as I'm creating it, and I cannot seem to figure out how to do this in post production in either photobooth...
