XFX 7800XT magnetic fans not spinning

[Help \(GPU\)](#)

Hi, good afternoon \o I'm posting this here since I can't find any information related.

I bought in December an XFX 7800XT Magnetic Air White GPU to replace my 2060, everything worked fine till last week.

A week ago, the GPU would only turn on fans when temperature reached high values (90~93°C) and it did it at full speed and noise, after cooling down fans turned off completely. But since yesterday fans don't even turn on when reaching 93°C and instead game performance drops heavily. (I.e. Kingdom Hearts 3 at max 4K went from 110fps to 23fps, Final Fantasy 16 became unplayable even at 1080p)

I have already:

- Disabled Zero RPM in AMD Adrenaline Software
- Driver uninstalling with DDU

your computer. Make sure you are only overclocking the gpu when it asks you to apply settings.

You should remove msi afterburner and do a clean install of the adrenaline software suite. Then try the settings above for the fan. Good luck!

Is my RX 5700 XT dying, or is it just 25.3.1 being horrible?
