

Authentik

This guide walks you through setting up **Authentik** as an OIDC provider for Grimmory. By the end, your users will be able to sign in to Grimmory with their Authentik account.

The setup has two parts: creating an OAuth2 application in Authentik, then entering the credentials in Grimmory. The whole process takes about 5 minutes.

ALREADY HAVE OIDC WORKING?

This guide covers the initial setup. For details on user provisioning, group mapping, OIDC-Only Mode, and other advanced features, see the [OIDC Settings](#) reference.

Part 1: Configure Authentik

Create the Application

Open your Authentik admin dashboard and click **"Create a new application"**. This launches the setup wizard.
